- **1.0.1**
Compatibility updates
- **1.0.0**
Initial release

Description

Cardlink Payment Gateway allows you to accept payment through various schemes such as Visa, Mastercard, Maestro, American Express, Diners, Discover cards on your website, with or without variable installments.

This plugin aims to offer new payment solutions to Cardlink merchants through the use of CMS plugin for their website creation and provide the possibility to add extra features without having web development knowledge.

Merchants with e-shops (redirect cases only) will be able to integrate the Cardlink Payment Gateway to their checkout page using the CSS layout that they want. Also they could choose between redirect or iframe option for the payment environment.

Once the payment is made, the customer returns to the online store and the order is updated.

Once you have completed the requested tests and any changes to your website, you can activate your account and start accepting payments.

Features

1. A dropdown option for instance between Worldline, Nexi και Cardlink.
2. Option to enable test environment. All transactions will be re-directed to the endpoint that represents the production environment by default. The endpoint will be different depending on which acquirer has been chosen from instance dropdown option.
3. Ability to define the maximum number of installments regardless the total order amount and ability to define the ranges of the total order amounts and the maximum installments (up to 10 conditions) for every range.
4. Option for pre-authorization or sale transactions.
5. Option for a user tokenization service. The card token will be stored at the merchant's e-shop database and will be used by customers to auto-complete future payments.
6. Redirection option: user should have a checkbox to enable pop up with iframe without redirection.
7. A text field for providing the absolute or relative (to Cardlink Payment Gateway location on server) url of custom CSS stylesheet, to change css styles in payment page.
8. Translation ready for Greek & English languages.
9. IRIS payments. Upon installation, an extra payment is created.
10. Not supporting iframe. The IRIS payments do not support the iframe feature.

Installation

If you have a copy of the plugin as a zip file, you can manually upload it and install it through the Plugins admin screen.

1. Navigate to Plugins > Add New.
2. Click the Upload Plugin button at the top of the screen.
3. Select the zip file from your local filesystem.
4. Click the Install Now button.
5. When the installation is complete, you'll see "Plugin installed successfully." Click the Activate Plugin button.

In rare cases, you may need to install a plugin by manually transferring the files onto the server. This is recommended only when absolutely necessary, for example when your server is not configured to allow automatic installations.

This procedure requires you to be familiar with the process of transferring files using an SFTP client. It is recommended for advanced users and developers.

Here are the detailed instructions to manually install a WordPress plugin by transferring the files onto the webserver.

Screenshots

1. The Cardlink settings screen used to configure the main Cardlink gateway.

The screenshot shows the 'Cardlink Payment Gateway' settings page in a WooCommerce admin interface. The left sidebar contains navigation links for Home, Orders, Customers, Coupons, Reports, Settings, Status, Extensions, Products, Analytics, Marketing, Appearance, Plugins, Users, Tools, and Settings. The main content area has tabs for General, Products, Shipping, Payments, Accounts & Privacy, Emails, Integration, and Advanced. The 'Payments' tab is active, showing the 'Cardlink Payment Gateway' settings. The settings include:

- Enable/Disable:** A checkbox to 'Enable Cardlink Payment Gateway' is checked.
- Test Environment:** A checkbox to 'Enable Cardlink Test Environment' is checked.
- Select Acquirer:** A dropdown menu set to 'Cardlink Checkout' with a note to 'Select your acquirer bank'.
- Title:** A text field containing 'Online secure payment with'.
- Description:** A text field containing 'Make your payment with Cardlink'.
- Merchant ID:** A text field containing '90003052'.
- Shared Secret key:** A text field containing '.....'.
- Maximum number of installments depending on the total order amount:** A table with three rows: (50, 2), (100, 4), and (150, 6). Each row has a trash icon. An 'Add variation' button is below the table with a note: 'Add amount and installments for each row. The limit is 10.'.
- Pre-Authorize:** A checkbox to 'Enable to capture preauthorized payments' is unchecked. A note states: 'Default payment method is Purchase, enable for Pre-Authorized payments. You will then need to accept them from Cardlink eCommerce Tool.'
- Store card details:** A checkbox to 'Enable Tokenization' is checked. A note states: 'If checked the user will have the ability to store credit card details for future purchases. You must contact Cardlink first.'
- Return page URL (Successful or Failed Transactions):** A dropdown menu set to 'Thank you page'. A note recommends selecting the default 'Thank You Page' for automatic handling of successful and failed transactions.
- Pay in website:** A checkbox to 'Enable payment frame' is unchecked. A note states: 'Customers will stay in website to complete payments without redirecting to Cardlink's eCommerce payment page. You must have a valid SSL certificate installed on your domain.'
- Css uri path:** A text field for a custom CSS stylesheet.
- Enable Debug mode:** A checkbox to 'Enabling this will log certain information' is unchecked. A note states: 'Enabling this (and the debug mode from your wp-config file) will log information, e.g. responses, which will help in debugging issues.'

 A 'Save changes' button is at the bottom left.

The screenshot shows the payment method selection screen during a WooCommerce checkout. It features three radio button options:

- Direct bank transfer:** Unselected.
- Cash on delivery:** Unselected.
- Online secure payment with:** Selected, accompanied by the 'WooCommerce cardlink Payments' logo.

 Below the options, the text 'Make your payment with Cardlink' is displayed. There is a checkbox for 'Store your card?' which is unchecked. A 'Choose Installments' section shows a dropdown menu currently set to 'Without installments'. At the bottom, a message states: 'Your personal data will be used to process your order, support your experience throughout this website, and for other purposes described in our [privacy policy](#).' Below this message is a large black button with the text 'Place order' in white.

- This is the front-end of Worldline Processing Payment Gateway plugin located in checkout page.

Your personal data will be used to process your order, support your experience throughout this website, and for other purposes described in our [privacy policy](#).

Place order

3. The IRIS Payment method settings screen used to configure the gateway.

The screenshot shows the 'Worldline Processing Payment Gateway with IRIS' settings page. At the top, there is a title and a brief description: 'Worldline Processing Payment Gateway allows you to accept payment through IRIS on your Woocommerce Powered Site.' Below this, there are four main configuration fields:

- Ενεργοποίηση/Απενεργοποίηση:** A checkbox labeled 'Enable IRIS Payment Gateway' is checked.
- Τίτλος:** A text input field containing 'Worldline Processing Payment Gateway with IRIS'.
- Περιγραφή:** A text area containing the text 'Πληρώστε μέσω της Worldline Processing IRIS: Δέχεται Visa, Mastercard, Maestro, American Express, Diners και Discover.'
- IRIS customer code:** An empty text input field.

At the bottom left of the form, there is a blue button labeled 'Αποθήκευση αλλαγών' (Save changes).

To use IRIS, navigate to the IRIS gateway settings screen and enter your IRIS customer code.
