Styling updates on iframe popup window
- **1.0.2**

Bugfix: Installments total number

- **1.0.1**  
Compatibility updates
- **1.0.0**  
Initial release

## Description

Cardlink Payment Gateway allows you to accept payment through various schemes such as Visa, Mastercard, Maestro, American Express, Diners, Discover cards on your website, with or without variable installments.

This plugin aims to offer new payment solutions to Cardlink merchants through the use of CMS plugin for their website creation and provide the possibility to add extra features without having web development knowledge.

Merchants with e-shops (redirect cases only) will be able to integrate the Cardlink Payment Gateway to their checkout page using the CSS layout that they want. Also they could choose between redirect or iframe option for the payment environment.

Once the payment is made, the customer returns to the online store and the order is updated.

Once you have completed the requested tests and any changes to your website, you can activate your account and start accepting payments.

## Features

1. A dropdown option for instance between Worldline, Nexi and Cardlink.
2. Option to enable test environment. All transactions will be re-directed to the endpoint that represents the production environment by default. The endpoint will be different depending on which acquirer has been chosen from instance dropdown option.
3. Ability to define the maximum number of installments regardless the total order amount and ability to define the ranges of the total order amounts and the maximum installments (up to 10 conditions) for every range.
4. Option for pre-authorization or sale transactions.
5. Option for a user tokenization service. The card token will be stored at the merchant's e-shop database and will be used by customers to auto-complete future payments.
6. Redirection option: user should have a checkbox to enable pop up with iframe without redirection.
7. A text field for providing the absolute or relative (to Cardlink Payment Gateway location on server) url of custom CSS stylesheet, to change css styles in payment page.
8. Translation ready for Greek & English languages.
9. IRIS payments. Upon installation, an extra payment is created.
10. Not supporting iframe. The IRIS payments do not support the iframe feature.

## Installation

If you have a Cardlink copy of the plugin as a zip file, you can manually upload it and install it through the Plugins admin screen.

1. Navigate to Plugins > Add New.
2. Click the Upload Plugin button at the top of the screen.
3. Select the zip file from your local filesystem.
4. Click the Install Now button.
5. When the installation is complete, you'll see "Plugin installed successfully." Click the Activate Plugin button.

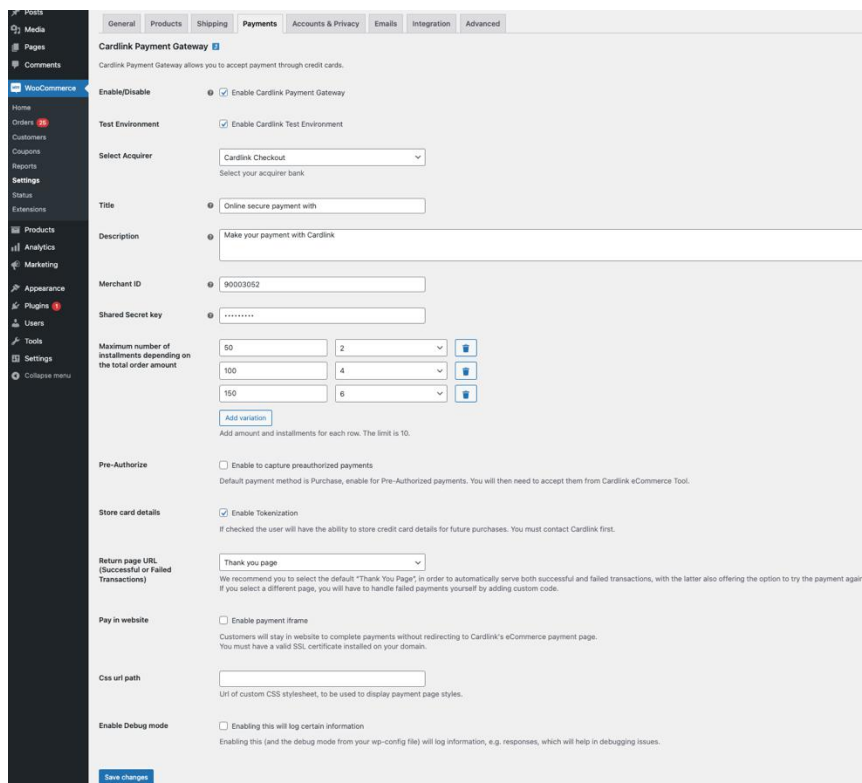

In rare cases, you may need to install a plugin by manually transferring the files onto the server. This is recommended only when absolutely necessary, for example when your server is not configured to allow automatic installations.

This procedure requires you to be familiar with the process of transferring files using an SFTP client. It is recommended for advanced users and developers.

Here are the detailed instructions to manually install a WordPress plugin by transferring the files onto the webserver.

### 3. The IRIS Payment method settings screen used to configure the gateway.

### Secondary actions

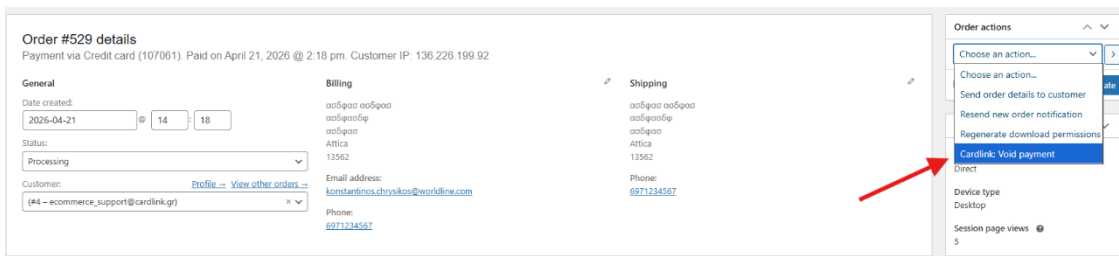

Secondary actions now available using our CMS plugin (Capture of preauth, Refund, Void, Status Request).

From the plugin dashboard, you can enable the capability to complete secondary transactions via XML API without leaving the plugin.

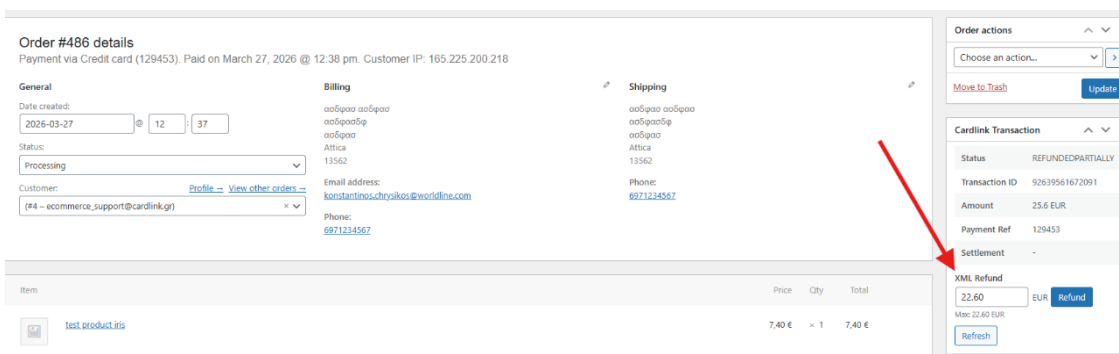

\*A request to enable the XML channel for secondary transactions on Cardlink must be submitted for your MID, and the plugin must be activated for it (Capture of preauth, Refund, Void).

### Void of a same-day transaction:

Additionally, there is the capability for partial or full refunds of transactions from of previous days:

\*\*Regarding preauthorization transactions, within the order, there is the option for Partial or Full Capture of preauth (completing the pre-approved amount) directly from the order details page:

The screenshot displays an order summary and transaction details. The summary table on the left shows the following items:

	-1,00 €
Items Subtotal:	18,00 €
Shipping:	0,00 €
Order Total:	18,00 €
<hr/>	
Paid:	18,00 €
March 19, 2026 via Credit card	
<hr/>	
Refunded:	-1,00 €
Net Payment:	17,00 €

At the bottom of the summary, it states: "This order is no longer editable."

The right-hand panel, titled "Cardlink Transaction", shows the following details:

- Average order value: 7,87 €
- Status: AUTHORIZED
- Transaction ID: 92639561637031
- Amount: 18 EUR
- Payment Ref: 124382
- Settlement: -
- Capture: 17.00 EUR (with a "Capture" button)
- Max: 17.00 EUR
- Refresh button

A red arrow points from the "Paid: 18,00 €" row in the summary table to the "Capture" section of the transaction panel.

## Support tickets

In case that you face any technical issue during the installation process, you can contact the Worldline e-commerce team at [ecommerce\\_support@cardlink.gr](mailto:ecommerce_support@cardlink.gr)
