## Cardlink Checkout Payment Gateway

Contributors: cardlink

Tags: payments, payment-gateway

Requires at least: 5.8.3

Tested up to: 7.0

Requires PHP: 7.4+

WC requires at least: 7.0.0

WC tested up to: 9.6

License: GPLv2 or later

License URI: <http://www.gnu.org/licenses/gpl-2.0.html>

## Changelog

- **1.1.1**
  - Fixed an iframe payment issue where customers could be redirected off the payment page to the order-received page before paying (most often on the first order of a session). Redirection now happens only after the gateway has returned its response.
  - Fixed the iframe completion flow so the customer's window is reliably redirected after a successful payment.
- **1.1.0**
  - Added support for Cardlink's Background confirmation service.
  - Added support for XML API operations (Capture, Refund, Void, Status) within order page.
  - Plugin refactor: modernised, namespaced codebase with cleaner separation between gateway, admin, and checkout layers.
- **1.0.14**

Woocommerce Compatibility updates. (If you already use IRIS with your own seller id, DO NOT install the new version!)
- **1.0.13**

Remove deprecated field for IRIS customer code (If you already use IRIS with your own seller id, DO NOT install the new version!).
- **1.0.12**

Enabled IRIS for Worldline and Cardlink.
- **1.0.11**

PHP compatibility updates & bug fixes.
- **1.0.10**

Display IRIS only for Nexi checkout acquirer.
- **1.0.9**

Compatibility updates & bug fixes.
- **1.0.8**

Added support for IRIS payments with Nexi Checkout acquirer.
- **1.0.7**

Added support for block-based checkout.
- **1.0.6**

Support Alpha bonus transactions.
- **1.0.5**

Bugfix: Fix compatibility issues with Payment Plugins for Stripe WooCommerce and Payment Plugins for PayPal WooCommerce plugins

- **1.0.4**  
Bugfix: Check if WooCommerce is installed and activated before initialize plugin functionality
- **1.0.3**  
Styling updates on iframe popup window
- **1.0.2**  
Bugfix: Installments total number
- **1.0.1**  
Compatibility updates
- **1.0.0**  
Initial release

## Description

Cardlink Payment Gateway allows you to accept payment through various schemes such as Visa, Mastercard, Maestro, American Express, Diners, Discover cards on your website, with or without variable installments.

This plugin aims to offer new payment solutions to Cardlink merchants through the use of CMS plugin for their website creation and provide the possibility to add extra features without having web development knowledge.

Merchants with e-shops (redirect cases only) will be able to integrate the Cardlink Payment Gateway to their checkout page using the CSS layout that they want. Also they could choose between redirect or iframe option for the payment environment.

Once the payment is made, the customer returns to the online store and the order is updated.

Once you have completed the requested tests and any changes to your website, you can activate your account and start accepting payments.

## Features

1. A dropdown option for instance between Worldline, Nexi and Cardlink.
2. Option to enable test environment. All transactions will be re-directed to the endpoint that represents the production environment by default. The endpoint will be different depending on which acquirer has been chosen from instance dropdown option.
3. Ability to define the maximum number of installments regardless the total order amount and ability to define the ranges of the total order amounts and the maximum installments (up to 10 conditions) for every range.
4. Option for pre-authorization or sale transactions.
5. Option for a user tokenization service. The card token will be stored at the merchant's e-shop database and will be used by customers to auto-complete future payments.
6. Redirection option: user should have a checkbox to enable pop up with iframe without redirection.
7. A text field for providing the absolute or relative (to Cardlink Payment Gateway location on server) url of custom CSS stylesheet, to change css styles in payment page.

8. Translation ready for Greek & English languages.
9. IRIS payments. Upon installation, an extra payment is created.
10. Not supporting iframe. The IRIS payments do not support the iframe feature.

## Installation

If you have a copy of the plugin as a zip file, you can manually upload it and install it through the Plugins admin screen.

1. Navigate to Plugins > Add New.
2. Click the Upload Plugin button at the top of the screen.
3. Select the zip file from your local filesystem.
4. Click the Install Now button.
5. When the installation is complete, you'll see "Plugin installed successfully." Click the Activate Plugin button.

In rare cases, you may need to install a plugin by manually transferring the files onto the server. This is recommended only when absolutely necessary, for example when your server is not configured to allow automatic installations.

This procedure requires you to be familiar with the process of transferring files using an SFTP client. It is recommended for advanced users and developers.

Here are the detailed instructions to manually install a WordPress plugin by transferring the files onto the webserver.

## Screenshots

1. The Cardlink settings screen used to configure the main Cardlink gateway.

The screenshot shows the 'Cardlink Payment Gateway' settings page in a WordPress admin dashboard. The page is titled 'Cardlink Payment Gateway' and includes a description: 'Cardlink Payment Gateway allows you to accept payment through credit cards.' The settings are organized into several sections:

- Enable/Disable:**  Enable Cardlink Payment Gateway
- Test Environment:**  Enable Cardlink Test Environment
- Select Acquirer:** A dropdown menu set to 'Cardlink Checkout' with the instruction 'Select your acquirer bank.'
- Title:** A text input field containing 'Online secure payment with'.
- Description:** A text input field containing 'Make your payment with Cardlink'.
- Merchant ID:** A text input field containing '90003052'.
- Shared Secret key:** A text input field containing '.....'.
- Maximum number of installments depending on the total order amount:** A table with three rows and two columns. The first column contains values 50, 100, and 150. The second column contains values 2, 4, and 6. There are 'Add variation' buttons next to each row. Below the table is the text: 'Add amount and installments for each row. The limit is 10.'
- Pre-Authorize:**  Enable to capture preauthorized payments. Default payment method is Purchase, enable for Pre-Authorized payments. You will then need to accept them from Cardlink's eCommerce Tool.
- Store card details:**  Enable Tokenization. If checked the user will have the ability to store credit card details for future purchases. You must contact Cardlink first.
- Return page URL (Successful or Failed Transactions):** A dropdown menu set to 'Thank you page'. Below it is the text: 'We recommend you to select the default "Thank You Page". In order to automatically serve both successful and failed transactions, with the latter also offering the option to try the payment again. If you select a different page, you will have to handle failed payments yourself by adding custom code.'
- Pay in website:**  Enable payment iframe. Customers will stay in website to complete payments without redirecting to Cardlink's eCommerce payment page. You must have a valid SSL certificate installed on your domain.
- Css url path:** A text input field.
- Enable Debug mode:**  Enabling this will log certain information. Enabling this (and the debug mode from your wp-config file) will log information, e.g. responses, which will help in debugging issues.

A 'Save changes' button is located at the bottom left of the settings area.

### 3. The IRIS Payment method settings screen used to configure the gateway.

### Secondary actions

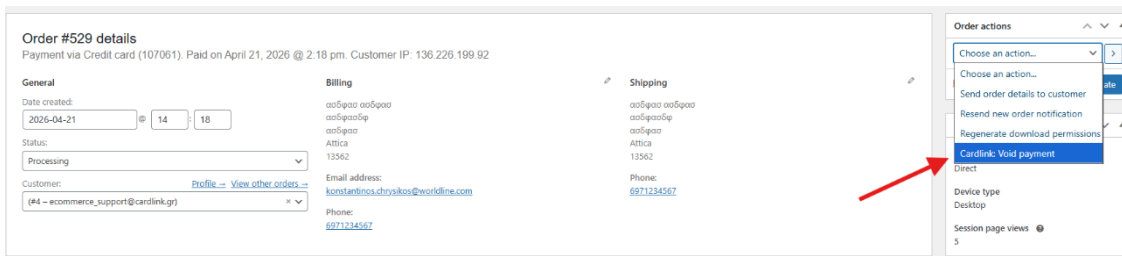

Secondary actions now available using our CMS plugin (Capture of preauth, Refund, Void, Status Request).

From the plugin dashboard, you can enable the capability to complete secondary transactions via XML API without leaving the plugin.

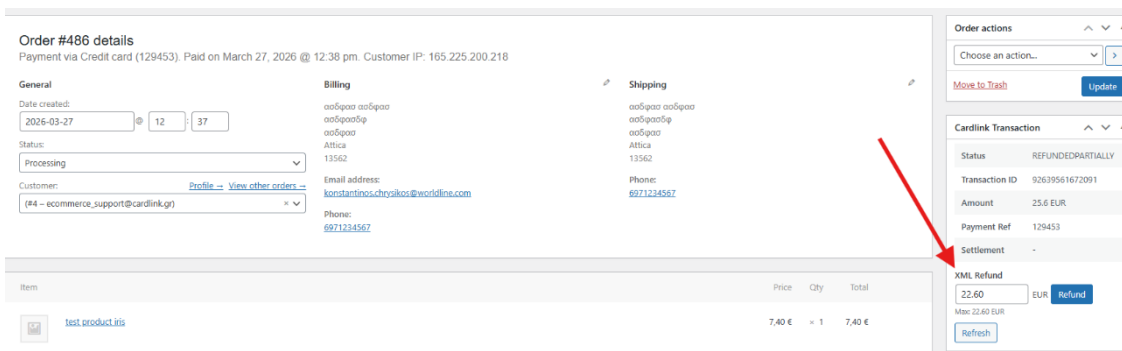

\*A request to enable the XML channel for secondary transactions on Cardlink must be submitted for your MID, and the plugin must be activated for it (Capture of preauth, Refund, Void).

### Void of a same-day transaction:

Additionally, there is the capability for partial or full refunds of transactions from of previous days:

\*\*Regarding preauthorization transactions, within the order, there is the option for Partial or Full Capture of preauth (completing the pre-approved amount) directly from the order details page:

The screenshot displays the Cardlink transaction interface. On the left, a table shows order details: Items Subtotal (18,00 €), Shipping (0,00 €), Order Total (18,00 €), Paid (18,00 €) on March 19, 2026 via Credit card, Refunded (-1,00 €), and Net Payment (17,00 €). A red arrow points from the 'Paid' row to the 'Capture' section on the right. The 'Capture' section includes a text input field with '17.00', a 'EUR' label, and a 'Capture' button. Below it, it says 'Max: 17,00 EUR' and has a 'Refresh' button. The top right shows 'Average order value 7,87 €'. The bottom of the interface states 'This order is no longer editable.'
