  - Fix iframe style
- 1.0.2**
  - Add order status field
- 1.0.1**
  - Total installments number
- 1.0.0**
  - Initial release

### Description

Cardlink Payment Gateway allows you to accept payment through various schemes such as Visa, Mastercard, Maestro, American Express, Diners, Discover cards on your website, with or without variable installments. This module aims to offer new payment solutions to Cardlink merchants for their Opencart 3.0.x online store without having web development knowledge. However, for the initial module installation some technical knowledge will be required.

Merchants with e-shops will be able to integrate the Cardlink Payment Gateway to their checkout page using the CSS layout that they want. Also, they can choose between redirect or IFRAME option for the payment environment. Once the payment is made, the customer is returned to the online store and the order is updated. Once you have completed the requested tests and any changes to your website, you can activate your account and start accepting payments.

## Features

1. A dropdown option for instance between Worldline, Nexi and Cardlink.
2. Option to enable test environment. All transactions will be re-directed to the endpoint that represents the production environment by default. The endpoint will be different depending on which acquirer has been chosen from instance dropdown option.
3. Ability to define the maximum number of instalments regardless the total order amount.
4. Option for pre-authorization or sale transactions.
5. Option for a user tokenization service. The card token will be stored at the merchant's e-shop database and will be used by customers to auto-complete future payments.
6. Redirection option: user should have a check box to enable pop up with i-frame without redirection.
7. Order status: Choose order status after successful payment.
8. A text field for providing the absolute or relative (to Cardlink Payment Gateway location on server) url of custom CSS stylesheet, to change CSS styles in payment page.
9. Translation ready for Greek & English languages.

## Features (IRIS)

1. A dropdown option for instance between Worldline, Nexi and Cardlink.
2. Option to enable test environment (sandbox). All transactions will be re-directed to the endpoint that represents the production environment by default.
3. Field for Merchant ID.
4. Field for Shared Secret Key.
5. Choose a custom title for payment method.
6. Option to set different order statuses for transactions with a captured payment.
7. Translation ready for Greek & English languages.
8. Not supporting iframe. Supporting only redirect method.

## Installation

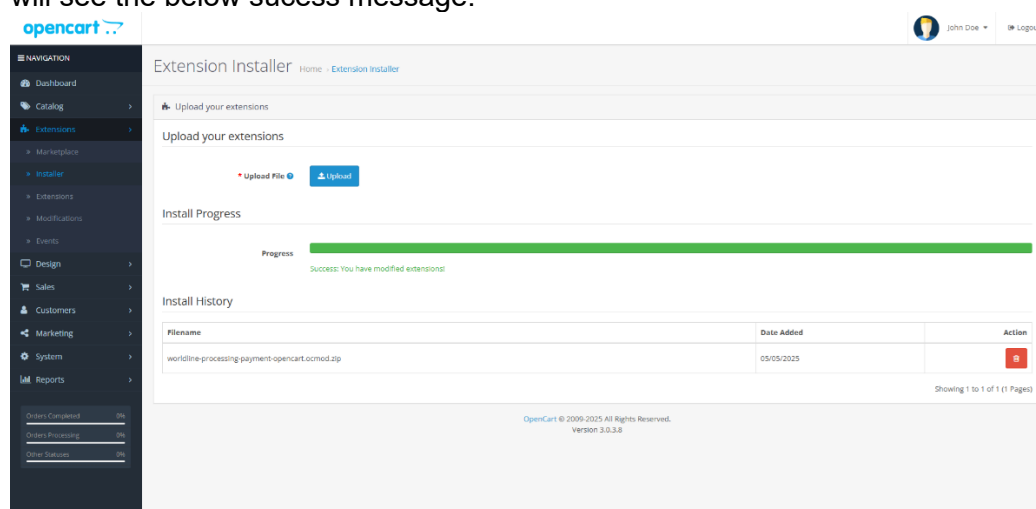

Firstly, find the plugins in the "INSTALL" folder.

cardlink-payment-opencart.ocmod.zip

cardlink-payment-opencart-iris.ocmod.zip

From your administration, go to Extensions > Installer and click on the Upload button. Find it and select it through the popup file browser.

Once the module's ocmod.zip file has been uploaded and the module installed, you will see the below success message.

After the success uploading go to Extensions > Extensions and filter the extensions by Payment. Find the Cardlink extension and click on the green icon on the right with the plus icon.

The screenshot shows the OpenCart admin interface. The left sidebar has a 'NAVIGATION' menu with links to Dashboard, Catalog, Extensions, Marketplace, Installer, Modifications, Events, Design, Sales, Customers, Marketing, System, and Reports. The main content area is titled 'Extensions' and shows a list of payment methods under the 'Payments' category. The list includes methods like Alipay, Alipay Cross-border, Amazon Pay, Authorize.Net, Bank Transfer, BluePay, CardConnect, Cardinity, Worldline Processing, and Cash On Delivery. Each method has a status (Enabled/Disabled) and an action button (edit/delete).

## Screenshots

The Cardlink Payment Gateway admin page used to configure the settings (Extensions > Extensions > Payments > Cardlink > Edit).

The screenshot shows the 'Worldline Processing' configuration page in the OpenCart admin interface. The page contains several configuration fields: Environment (Test mode), Acquirer (Worldline Processing), Merchant ID (70000269), Shared Secret Key (Cardlink), Payment Title (Worldline payment), Instalments (with an example and note), Transaction Type (Purchase), Tokenization (Enable), Worldline Processing eCommerce Payment Page (Redirection), Order Status (Complete), and Cus URL. There is also a 'Status' field set to 'Enabled'.

The Cardlink Payment Gateway IRIS admin page used to configure the settings (Extensions > Extensions > Payments > Cardlink Iris > Edit).

The screenshot displays the 'Worldline Processing Iris' configuration page within the OpenCart admin interface. The left sidebar shows a navigation menu with options like Dashboard, Catalog, Extensions, and Reports. The main content area contains a form for configuring the payment gateway. The form includes fields for Environment (Test mode), Acquirer (Next), Merchant ID (70000196), Shared Secret Key (Cardlink1), RF Payment Code (90002), Payment Title (IRIS), Order Status (Pending), and Status (Enabled). A 'Sort Order' field is also present. The footer of the page states 'OpenCart © 2009-2025 All Rights Reserved. Version 3.0.3.8'.

This is the front-end of Cardlink Payment Gateway plugin located in checkout page.

## Checkout

The screenshot shows the OpenCart checkout process with six steps: Step 1: Checkout Options, Step 2: Billing Details, Step 3: Delivery Details, Step 4: Delivery Method, Step 5: Payment Method, and Step 6: Confirm Order. Step 5 is the active step, titled 'Payment Method'. It contains the instruction 'Please select the preferred payment method to use on this order.' and three radio button options: 'Worldline payment' (selected), 'IRIS', and 'Cash On Delivery'. Below these options is a section titled 'Add Comments About Your Order' with a large text area. At the bottom of the step, there is a checkbox for 'I have read and agree to the Terms & Conditions' and a 'Continue' button.
