Cardlink Check out Payment Gateway

Contributors: cardlink

Tags: payments, payment-gateway

Requires at least: 1.8

Tested up to: 1.9.3.8

Requires PHP: 7.x

License: GPLv2 or later

License URI: <http://www.gnu.org/licenses/gpl-2.0.html>

Cardlink Payment Gateway allows you to accept payment through various schemes such as Visa, Mastercard, Maestro, American Express, Diners, Discover cards on your website.

Changelog

- **1.1.6**
 - Remove requirement for IRIS customer code configuration setting. If you already use IRIS with your own seller id, DO NOT install the new version!
- **1.1.5**
 - Add Cardlink and Worldline as IRIS business partners.
- **1.1.4**
 - Payment method activation fixes.
- **1.1.3**
 - Minor fixes.
 - Removed unused files.
 - Updated README.
- **1.1.2**
 - Added support for IRIS payments.
- **1.1.1**
 - Fixed bug that inhibits sending new order notification email.
- **1.1.0**
 - Bug fixes
 - Validate Alpha Bonus digest
- **1.0.0**
 - Initial release

Support tickets

In case you face any technical issue during the installation process, you can contact the Cardlink e-commerce team at ecommerce_support@cardlink.gr.

Description

Cardlink Payment Gateway allows you to accept payment through various schemes such as Visa, Mastercard, Maestro, American Express, Diners, Discover cards on your website, with or without variable installments.

This module aims to offer new payment solutions to Cardlink merchants for their Magento 1.x online store without having web development knowledge. However, for the initial module installation some technical knowledge will be required.

Merchants with e-shops (redirect cases only) will be able to integrate the Cardlink Payment Gateway to their checkout page using the CSS layout that they want. Also, they could choose between redirect or IFRAME option for the payment environment. Once the payment is made, the customer returns to the online store and the order is updated.

Once you have completed the requested tests and any changes to your website, you can activate your account and start accepting payments.

Features

1. A dropdown option for instance between Worldline, Nexi and Cardlink.
2. Option to enable test environment (sandbox). All transactions will be re-directed to the endpoint that represents the production environment by default. The endpoint will be different depending on which acquirer has been chosen from instance dropdown option.
3. Ability to define the maximum number of installments regardless of the total order amount.
4. Ability to define the ranges of the total order amounts and the maximum number of installments for each range.
5. Option for pre-authorization or sale transactions.
6. Option for a user tokenization service. The card token will be stored at the merchant's e-shop database and will be used by customers to auto-complete future payments.
7. In-store checkout option: the merchant can configure the payment process to take place inside a pop up with IFRAME to mask the redirection process from the customers.
8. A text field for providing the absolute or relative (to Cardlink Payment Gateway location on server) URL of custom CSS stylesheet, to apply custom CSS styles in the payment page.
9. Translation ready for Greek & English languages.
10. Support for IRIS payments for Worldline, Nexi and Cardlink acquirers.
11. The IFRAME feature is not supported for IRIS payments

Installation

You need to manually upload the contents of the .zip file of the module's latest version to your server's web root folder that your Magento store is installed. You will first need to extract the file's contents to a temporary folder.

Depending on your hosting provider, you will probably have to be familiar with the process of transferring files using an FTP or SFTP client. If no FTP/SFTP access is provided, use your hosting provider's administration panel to upload the folders to the folder of your Magento installation.

For security reasons, Web browsers will not send target domain cookies when the referrer website is on another domain and data are POSTed unless the SameSite option of these cookies is set to the value None. If you fail to properly configure the required hosting settings, customers returning from the payment gateway will be automatically logged out from their accounts.

The following configuration instructions will manipulate cookies set by your store to allow customer sessions to persist after returning from the payment gateway.

1.1.1. Magento Web Settings

Go to System > Configuration > General > Web. If there is a section named Session Cookie Management, set the Same-Site setting to None. This should be sufficient. Clear your site cookies or open an Incognito window, place a test order using card payment and check whether the user session is retained after a successful payment. If not, proceed with the following web server configuration actions.

1.1.2. Apache Web Server

For hosting solutions running the Apache web server software, you will need to add the following lines to your web site's root .htaccess file. Make sure the mod_headers Apache module is installed and active.

```
<IfModule mod_headers.c>
Header always edit Set-Cookie ^(.*)$ $1;SameSite=None;Secure
</IfModule>
```

1.1.3. Nginx Web Server

If your hosting provider uses the Nginx web server instead, you will need to add/edit the following lines of code to your virtual host's configuration file.

```
location / {
    proxy_cookie_path / "/; SameSite=None; Secure";
}
```

1.1.4. Plesk Hosting Control Panel

If you are using Plesk and nginx in proxy mode, under Apache & nginx Setting for ... > Additional nginx directives add only the following line:

```
proxy_cookie_path / "/; SameSite=None; Secure";
```

If you are only using Apache, add the following configuration lines in the Additional Apache directives section on the same page. By default, Plesk has the Apache mod_headers module installed and active however, verify that this is the case for your Plesk installation.

```
<IfModule mod_headers.c>  
Header always edit Set-Cookie ^(.*)$ $1;SameSite=None;Secure  
</IfModule>
```

If you are unsure or unfamiliar with the actions described above, please ask a trained IT person or contact your hosting provider to do them for you.

Cardlink Payment Gateway CheckOut

Enabled ☒ [STORE VIEW]

New Order Status [STORE VIEW]

Payment Applicable From [STORE VIEW]

Sort Order [STORE VIEW]

Title [STORE VIEW]
⚡ The title of the payment method to be displayed during the checkout.

Description [STORE VIEW]
⚡ A short description of the payment method to be displayed during the checkout.

Business Partner [STORE VIEW]
⚡ Identify the business partner that will handle payment transactions as agreed with Cardlink.

Merchant ID [STORE VIEW]
⚡ The merchant ID provided by Cardlink.

Shared Secret [STORE VIEW]
⚡ The shared secret code provided by Cardlink.

Transactions Environment [STORE VIEW]
⚡ Identify the working environment for payment transactions.

Payment Action [STORE VIEW]
⚡ Identify the type of transaction to perform. By selecting the 'Authorize' option, you will need to manually capture the order amount on Cardlink's merchant dashboard.

Accept Installments ☒ [STORE VIEW]
⚡ Enable installment payments and define the maximum number of installments.

Order Amount Based Installments

Start Amount	End Amount	Maximum Installments	
<input type="text" value="0"/>	<input type="text" value="100"/>	<input type="text" value="3"/>	Delete
<input type="text" value="101"/>	<input type="text" value="200"/>	<input type="text" value="6"/>	Delete
<input type="text" value="201"/>	<input type="text" value="0"/>	<input type="text" value="12"/>	Delete
Add Range			

⚡ Set the amount ranges to limit the maximum allowed number of installments.

Allow Tokenization ☒ [STORE VIEW]
⚡ Enable customers to select whether they want to secure store their payment cards for future checkouts.

Checkout without Leaving Your Store ☒ [STORE VIEW]
⚡ Perform the payment flow without having the customers leave your website for Cardlink's payment gateway. You will need to have a valid SSL certificate properly configured on your domain.

Force Store Language on Cardlink's Payment Gateway ☒ [STORE VIEW]
⚡ Instruct Cardlink's Payment Gateway to use the language of the store that the order gets placed.

Display Cardlink Logo ☒ [STORE VIEW]
⚡ Display the Cardlink logo next to the payment method title.

CSS URL [STORE VIEW]
⚡ Full URL of custom CSS stylesheet, to be used to display payment page styles.

Log Debug Information ☒ [STORE VIEW]
⚡ Store debug log information in file cardlink.log. Use only for a limited time frame and delete the log file afterwards.

5	ORDER REVIEW	
---	--------------	--

- To set up IRIS payments, you will need to have the Merchant ID and Shared Secret specifically issued for use with IRIS. Other settings are similar to the ones for Card Payments.

Cardlink CheckOut - Pay via IRIS

Display and debug settings for the 'Pay via Card' method are shared with this method.
