

e-Commerce checkout Payment Gateway

Readme for CS-Cart

Ημερομηνία: 27/05/2026

Worldline Checkout Payment Gateway

Description

Worldline Payment Gateway allows you to accept payment through various schemes such as Visa, Mastercard, Maestro, American Express, Diners. Discover cards on your website, with or without variable installments.

This plugin aims to offer new payment solutions to Worldline merchants through the use of CMS plugin for their website creation and provide the possibility to add extra features without having web development knowledge.

Merchants with e-shops (redirect cases only) will be able to integrate the Worldline Payment Gateway to their checkout page using the CSS layout that they want. Also, they could choose between redirect or i-frame option for the payment environment. Once the payment is made, the customer returns to the online store and the order is updated.

Once you have completed the requested tests and any changes to your website, you can activate your account and start accepting payments.

Main Features

1. Card payments through Cardlink Checkout, Nexi Checkout or Worldline Greece Checkout.
2. Test and live mode selection.
3. Sale and pre-authorization transaction types.
4. Installment rules by minimum order amount, with a maximum installment value of 60.
5. Optional customer card tokenization for future purchases.
6. Optional iframe payment mode for card payments.
7. Custom CSS URL support for the hosted payment page.
8. IRIS payment method created on addon installation.
9. Optional IRIS RF payment code generation when an IRIS Customer Code is configured.
10. Apple Pay and Google Pay wallet buttons when wallets are enabled.
11. Server-to-server background confirmation URL for Cardlink back-office setup.
12. Order page transaction history with status, settlement state and transaction IDs.
13. Direct capture, void and refund actions from the CS-Cart admin order page.
14. Greek and English language files.
15. Automatic payment method icon setup on installation.

Changelog

1.3.1

- Adds wallet support controls and checkout wallet rendering.
- Adds Google Pay 3D Secure finalize flow.
- Adds background confirmation URL display and endpoint.
- Adds improved direct transaction history parsing.
- Adds admin order transaction history table.
- Adds direct capture, void and refund controls.
- Adds settlement-aware action routing.
- Adds support for transaction-level action selection when multiple captures exist.

1.1.5

- Made seller id optional for Nexi

1.1.4

- Fixed RF code generation on Nexi+Cardlink.
- Fixed digest check on Worldline

1.1.3

- Enabled IRIS for Worldline and Cardlink.

1.1.2

- Fixed parameters order that in specific conditions could result in invalid digest.

1.1.1

- Added fix for overrides by other addons. Currently payment_dependencies addon.

1.1.0

- Added support for IRIS payments on Nexi
- Now addon can add payment methods with images

1.0.3

- Fixed extra check if bank not send field

1.0.2

- Added ship params
- Fixed invalid digest error

1.0.1

- Added ALPHA Bonus • 1.0.0
- Initial release

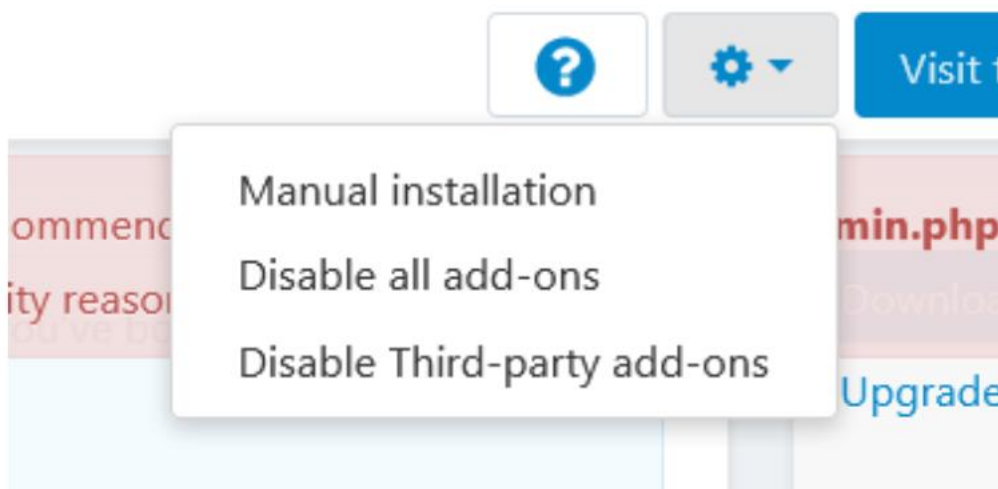

Effort

1. A dropdown option for instance between Worldline, Nexi and Cardlink.
2. Option to enable test environment. All transactions will be re-directed to the endpoint that represents the production environment by default. The endpoint will be different depending on which acquirer has been chosen from instance dropdown option.
3. Ability to define the maximum number of installments (with a max limit of 60) regardless the total order amount.
4. Option for pre-authorization or sale transactions.
5. Option for a user tokenization service. The card token will be stored at the merchant's e-shop database and will be used by customers to auto-complete future payments.
6. Redirection option: user should have a check box to enable i-frame payment mode without redirection.
7. A text field for providing the absolute or relative (to Cardlink Payment Gateway location on server) url of custom CSS stylesheet, to change css styles in payment page.
8. Translation ready for Greek & English languages.
9. IRIS payments for all acquirers. Upon installation, an extra payment is created.
10. Not supporting iframe. The IRIS payments does not support the iframe feature.

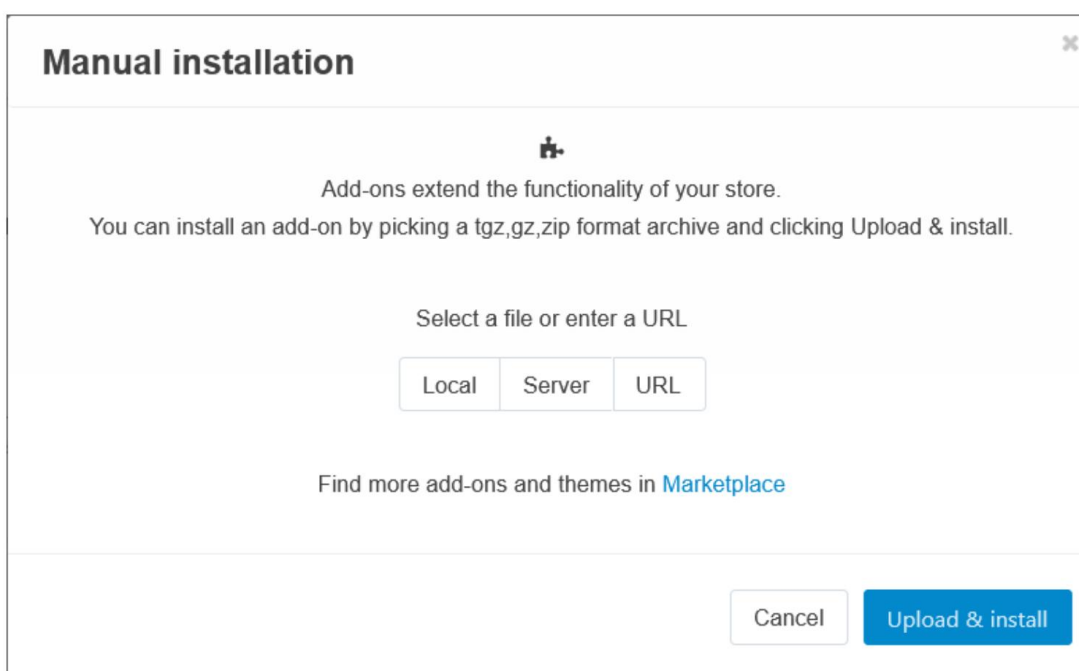

Intallation

If you have a copy of the plugin as a zip file, you can manually upload it and install it through the "**Manage Addons > Manual Installation**" admin page. This can be found by clicking the "**Manual Installation**" option as shown in the following image:

Image:

1. Upload cardlink.zip as shown in the following image:

2. After upload, you should locate the Cardlink addon in the addons list and click "Install".

3. Go to "Administration > Payment methods". There will be two new payment methods named "Cardlink" & "IRIS by Cardlink".

4. Click on main payment method (Cardlink) and then click on the "Configure" tab and then fill in the payment module settings as shown in the following image:

Cardlink payment Method Settings

Acquirer

Select the acquiring gateway instance:

1. Cardlink Checkout
2. Nexi Checkout
3. Worldline Greece Checkout

The selected acquirer controls the test and live endpoint used by the addon.

Merchant ID

The merchant identifier provided by Cardlink or the selected acquirer.

Shared Secret

The shared secret used to calculate and validate request and response digests. This value must match the one configured for the merchant account.

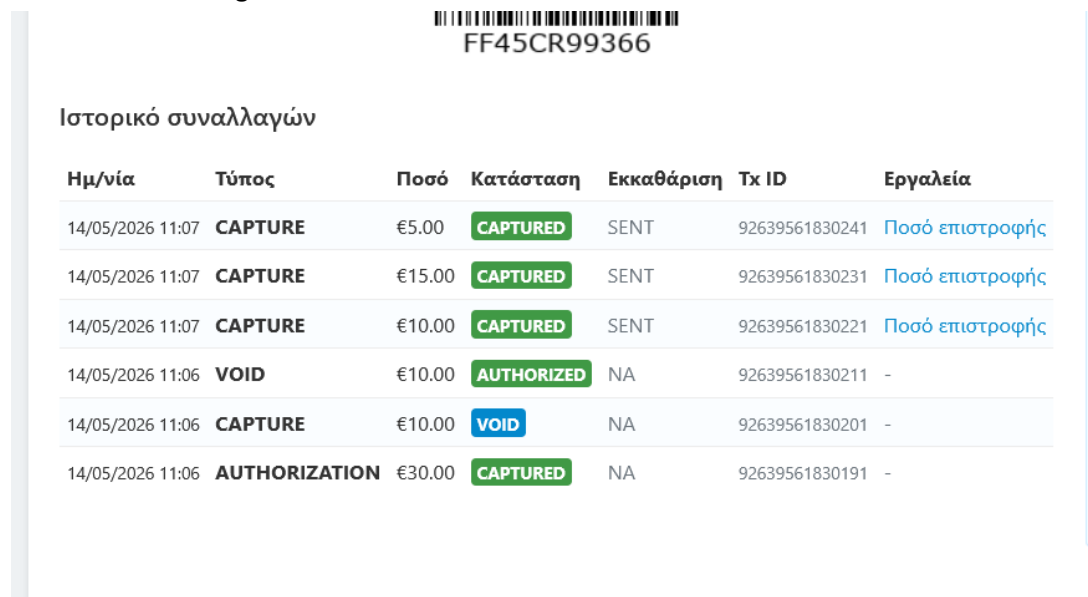

Enable Secondary Actions

Configuration flag for direct post-payment actions from the CS-Cart order page, such as capture, void and refund.

When the transaction supports it, the admin order page can show:

1. Full capture.
2. Partial capture.
3. Capture remaining amount.
4. Void transaction.
5. Refund amount.
6. Transaction history actions per capture row.

As shown on image:

Ημ/νία	Τύπος	Ποσό	Κατάσταση	Εκκαθάριση	Tx ID	Εργαλεία
14/05/2026 11:07	CAPTURE	€5.00	CAPTURED	SENT	92639561830241	Ποσό επιστροφής
14/05/2026 11:07	CAPTURE	€15.00	CAPTURED	SENT	92639561830231	Ποσό επιστροφής
14/05/2026 11:07	CAPTURE	€10.00	CAPTURED	SENT	92639561830221	Ποσό επιστροφής
14/05/2026 11:06	VOID	€10.00	AUTHORIZED	NA	92639561830211	-
14/05/2026 11:06	CAPTURE	€10.00	VOID	NA	92639561830201	-
14/05/2026 11:06	AUTHORIZATION	€30.00	CAPTURED	NA	92639561830191	-

Enable Wallets

Enables Apple Pay and Google Pay buttons in checkout.

Custom CSS

Optional URL of a custom stylesheet for the hosted gateway payment page.

Currency

Currently the payment method configuration exposes EUR.

Pre Authorize

Controls the transaction type:

1. Disabled: sale/purchase transaction.
2. Enabled: pre-authorized transaction.

Pre-authorized orders are stored as Open in CS-Cart when the gateway returns AUTHORIZED. They can later be captured or voided if secondary actions are available.

Store Card Details

Allows logged-in customers to save tokenized card details for future purchases.

Notes:

1. The merchant account must support tokenization.
2. Tokenization is disabled when iframe mode is enabled.
3. Stored cards are saved in `cardlink_cards`.
4. Customers can remove stored cards from checkout.

Enable Payment Iframe

Displays the card payment page inside the store checkout instead of redirecting the customer away from the site.

Notes:

1. The store must use a valid SSL certificate.
2. Some checkout functionality may be unavailable in iframe mode.
3. IRIS payments do not support iframe mode.
4. Tokenization and iframe mode are mutually exclusive in the admin UI.

Test/Live Mode

Selects whether requests are sent to test or production endpoints.

Background Confirmation URL

πληρωμή:

Οι πελάτες θα παραμένουν στο website για να ολοκληρώσουν την πληρωμή χωρίς ανακατεύθυνση στη σελίδα πληρωμής της Cardlink.
Πρέπει να έχετε έγκυρο SSL certificate εγκατεστημένο στο domain σας.
Δεν συνιστάται, γιατί ορισμένες λειτουργίες δεν θα είναι διαθέσιμες. Για παράδειγμα, ο πελάτης δεν θα μπορεί να εγγραφεί σε newsletters κατά το checkout.

Λειτουργία Test/Live:

Τέστ

URL επιβεβαίωσης
background:

https://shopifier.gr/index.php?dispat

Χρησιμοποιήστε αυτό το URL στο back-office της Cardlink ως server-to-server endpoint επιβεβαίωσης.

Δόσεις:

Ελάχιστο ποσό

Αριθμός δόσεων

Configure this URL in the Cardlink back-office as the server-to-server confirmation endpoint. The endpoint validates the digest and updates the order independently from the customer browser return flow.

Installments

Installment rules are configured as rows:

1. Minimum amount.
2. Number of installments.

At checkout, the addon shows only installment options whose minimum amount is lower than the current cart subtotal. The selected installment count is stored in the cart session and sent to the gateway as `extInstallmentperiod`.

The addon limits installments to a maximum of 60.

Update

Before update you need to have the **Rebuild cache automatically** switch to ON or otherwise addon changes might not appear as they should.

You can find the switch at: **Website** -> **Themes** (?dispatch=themes.manage) as shown in image:

Layouts Templates Product tabs More Save + Upload theme

Rebuild cache automatically

Modified files are tracked in real time (including the files modified directly on server) and re-cached. Block cache will be disabled. Store performance may be slightly affected. Recommended to disable on production.

Theme editor Edit layout on-site Edit content
